XCAL NuSTAR-XMM WITH COMA CLUSTER

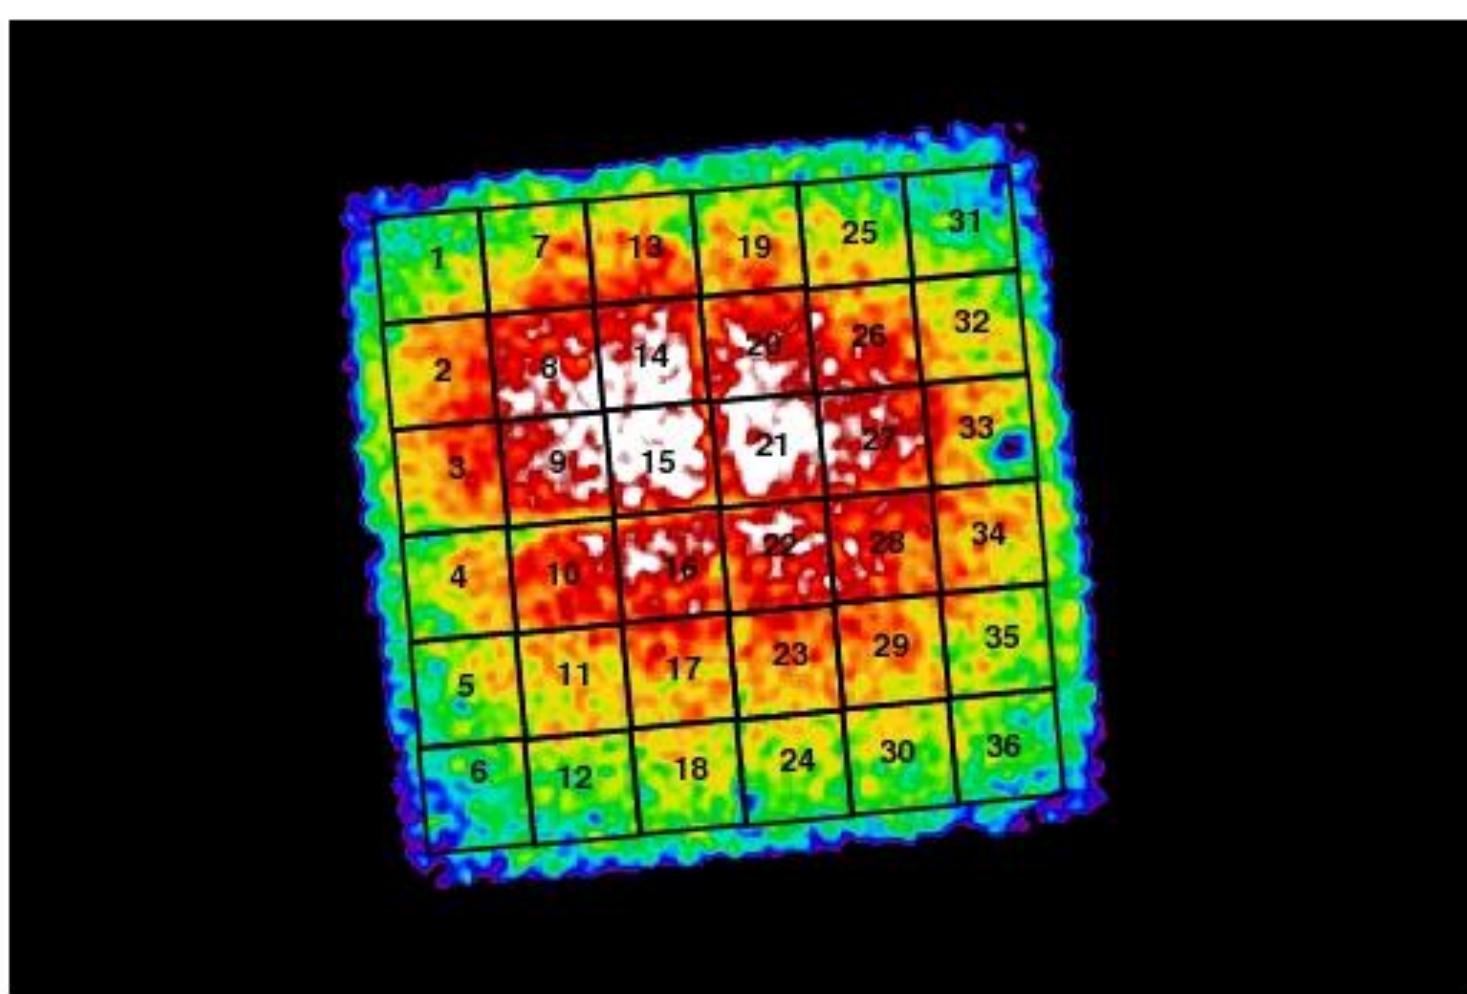

FABIO GASTALDELLO
INAF, IASF-Milano

NuSTAR calibration & cluster WG

ANALYSIS

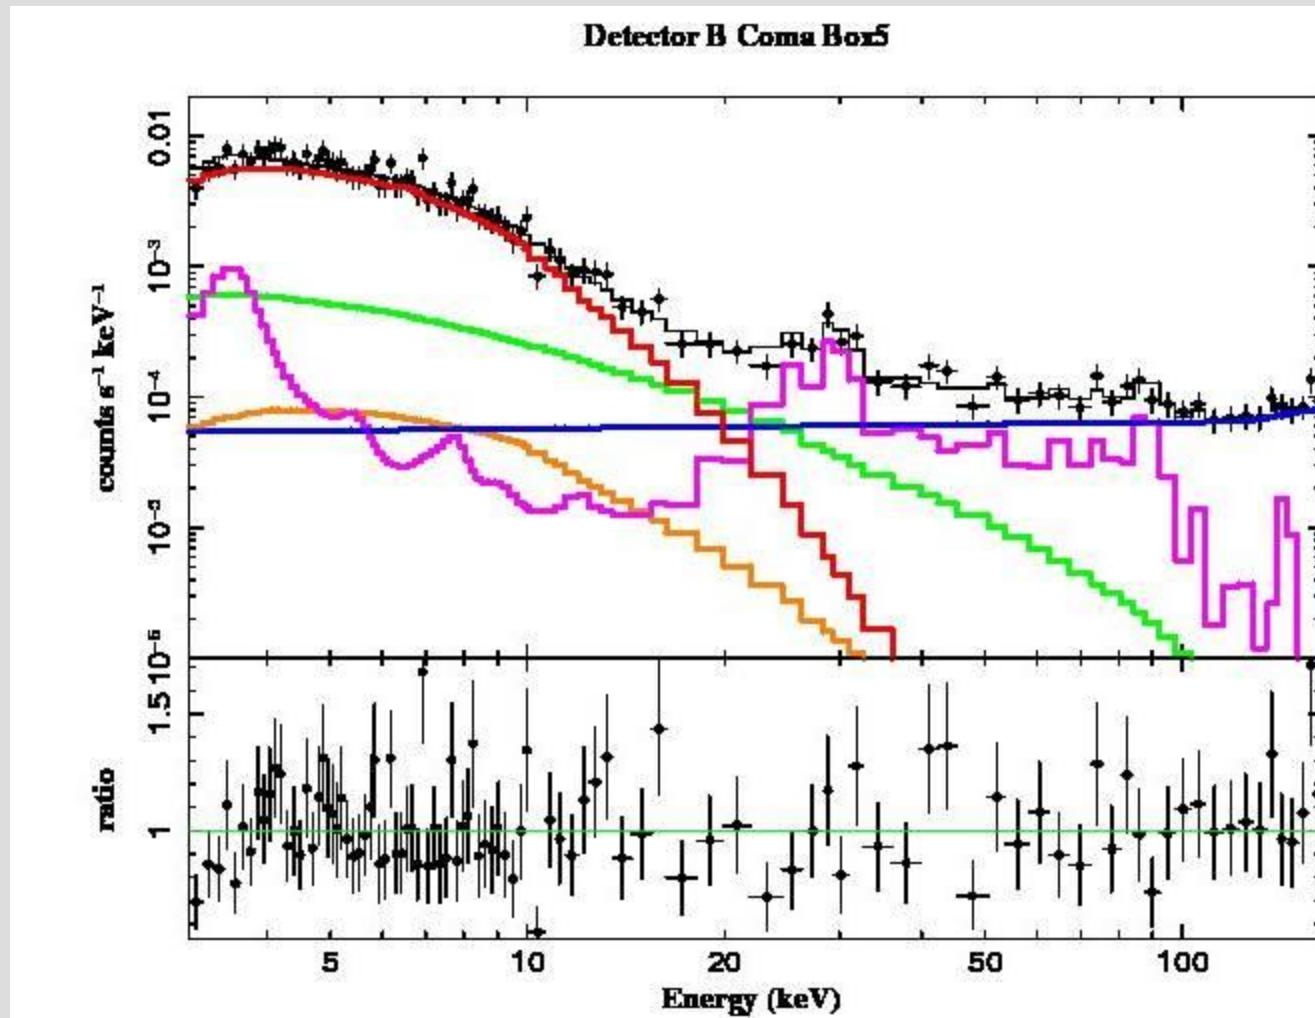

- Nearby cluster with a rather uniform high temperature distribution (7-9 keV). Its center observed mainly (but not only) for calibration purposes
- NuSTAR analysis with nustardas1.3.1 and CALDB 20132213
- XMM pn (doubles) analysis obsid 0153750101 December 2001 with SAS 12.0

COMA NUSTAR TEMPERATURE MAP

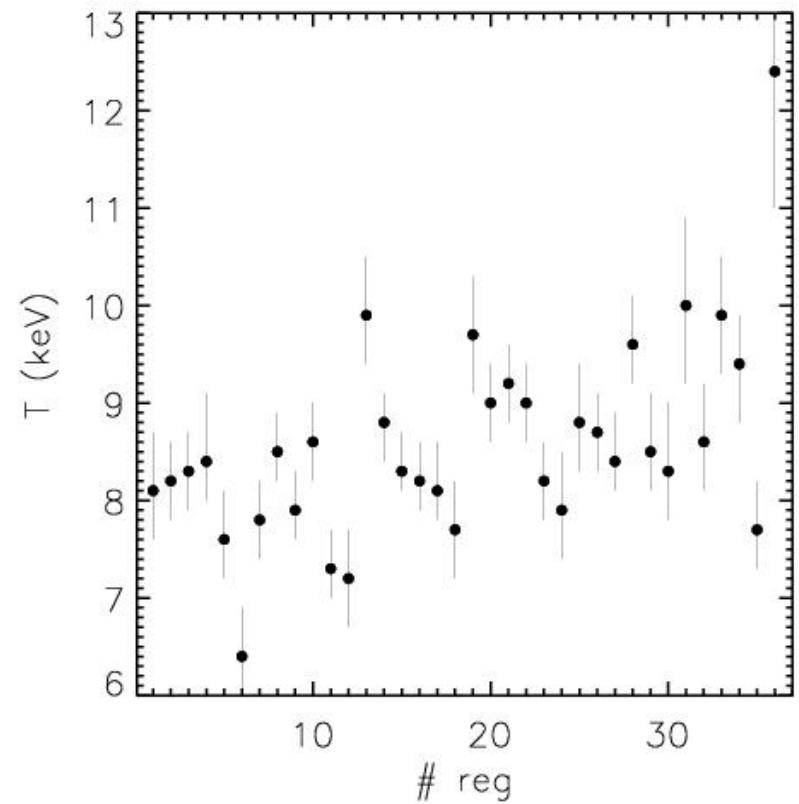

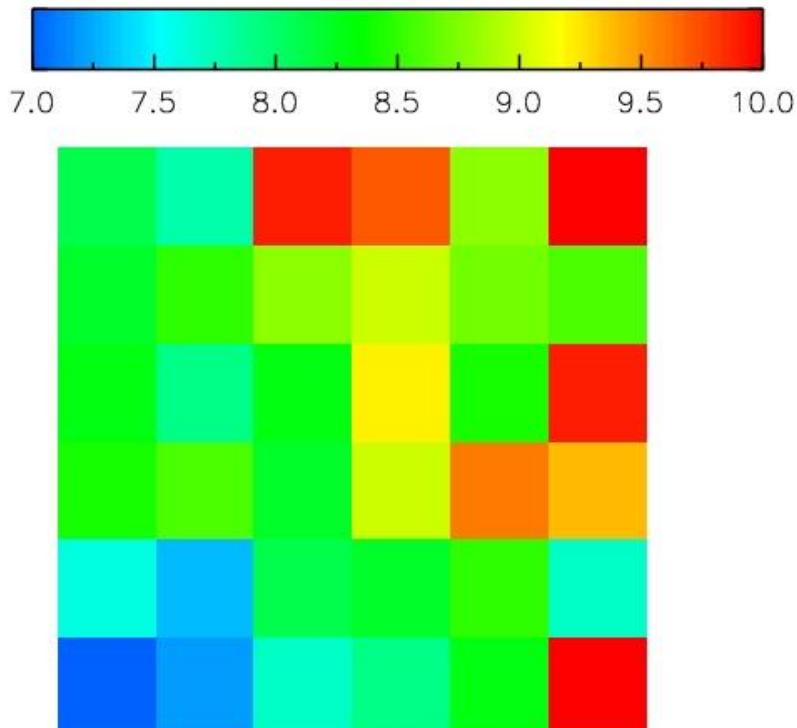

Boxes of 2 arcmin x 2 arcmin

COMA NUSTAR TEMPERATURE MAP

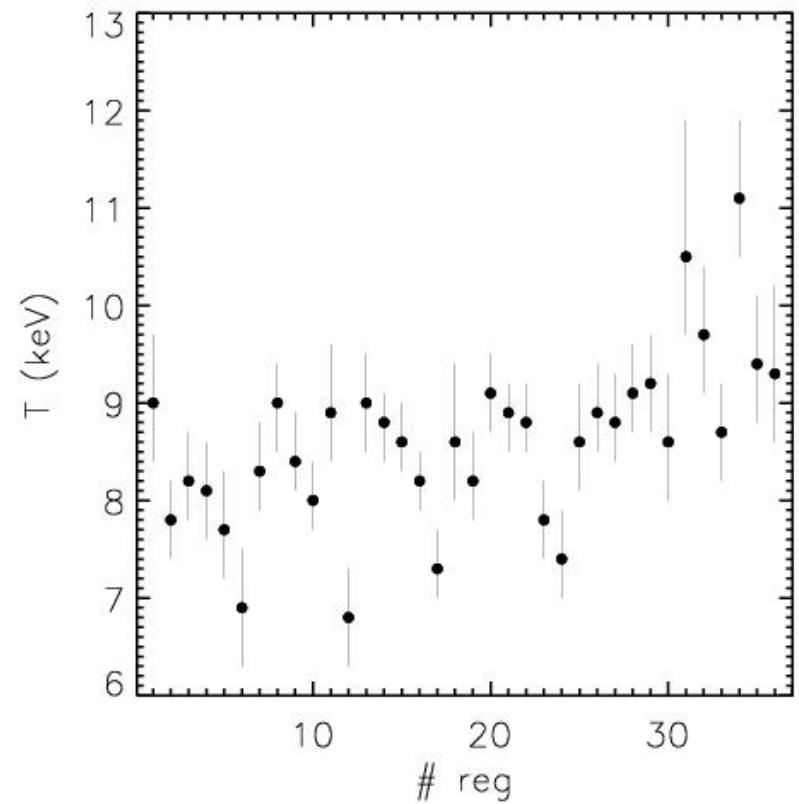

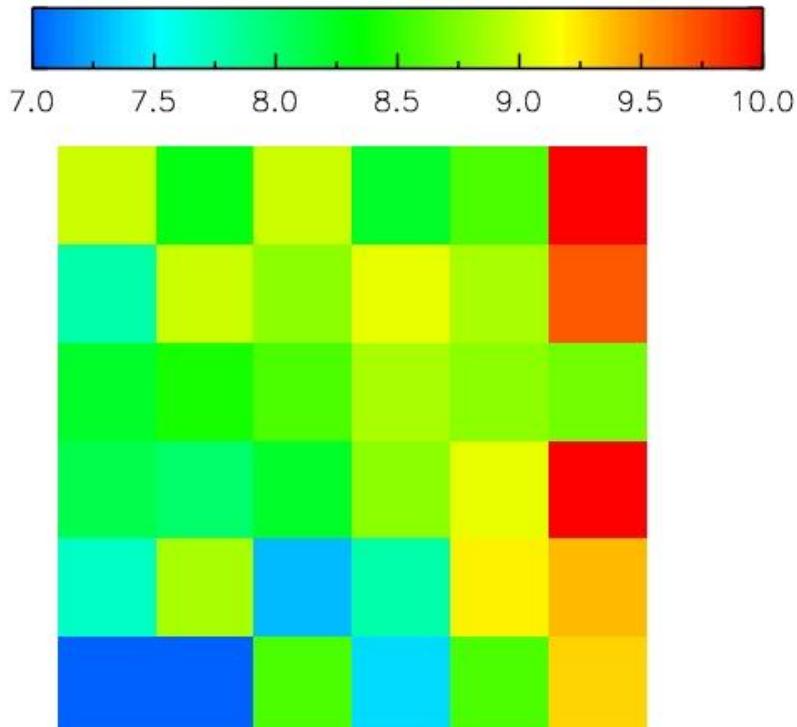

DET A 3-20 keV

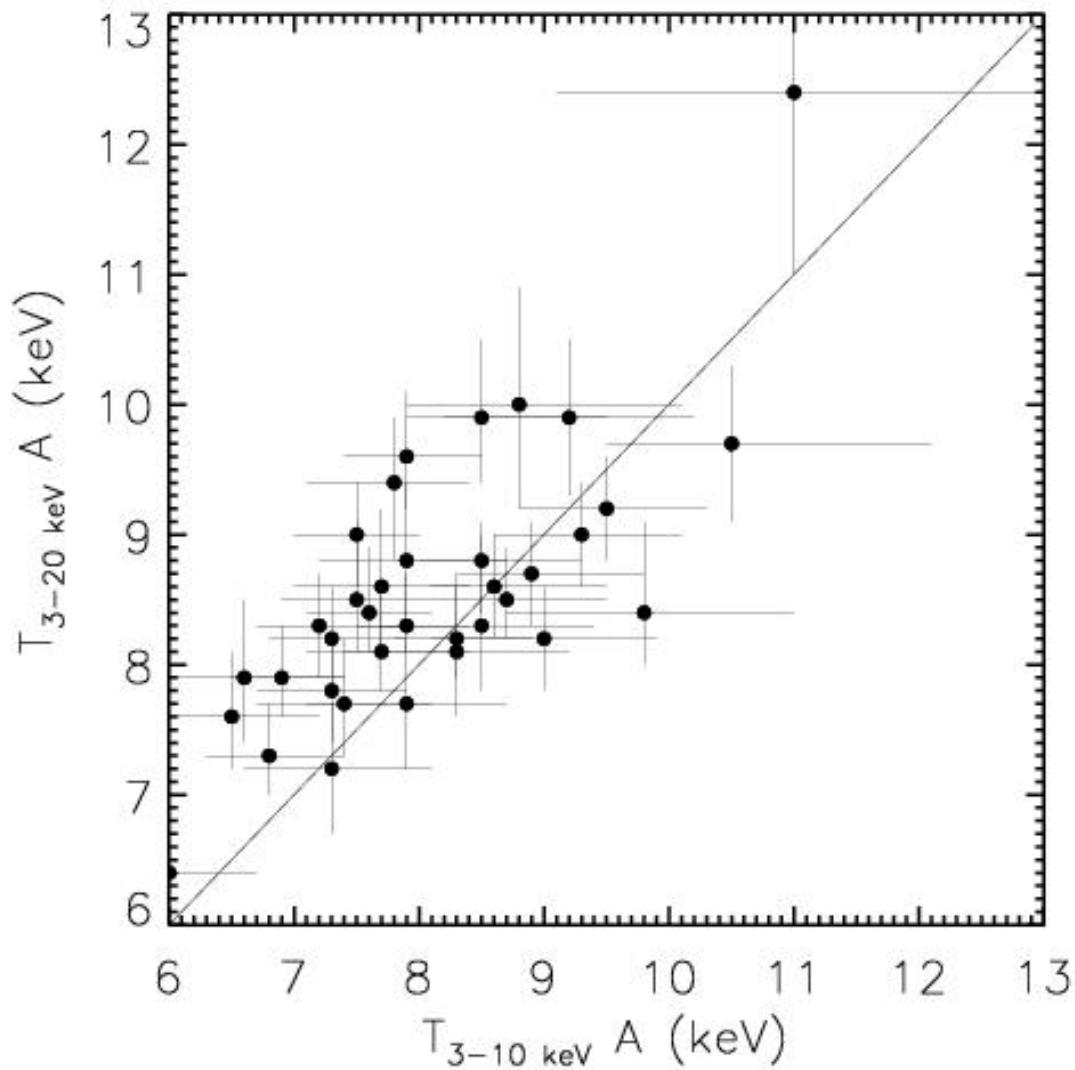

Error in T mean of 0.49 keV and stdev of 0.18 keV

DET B 3-20 keV

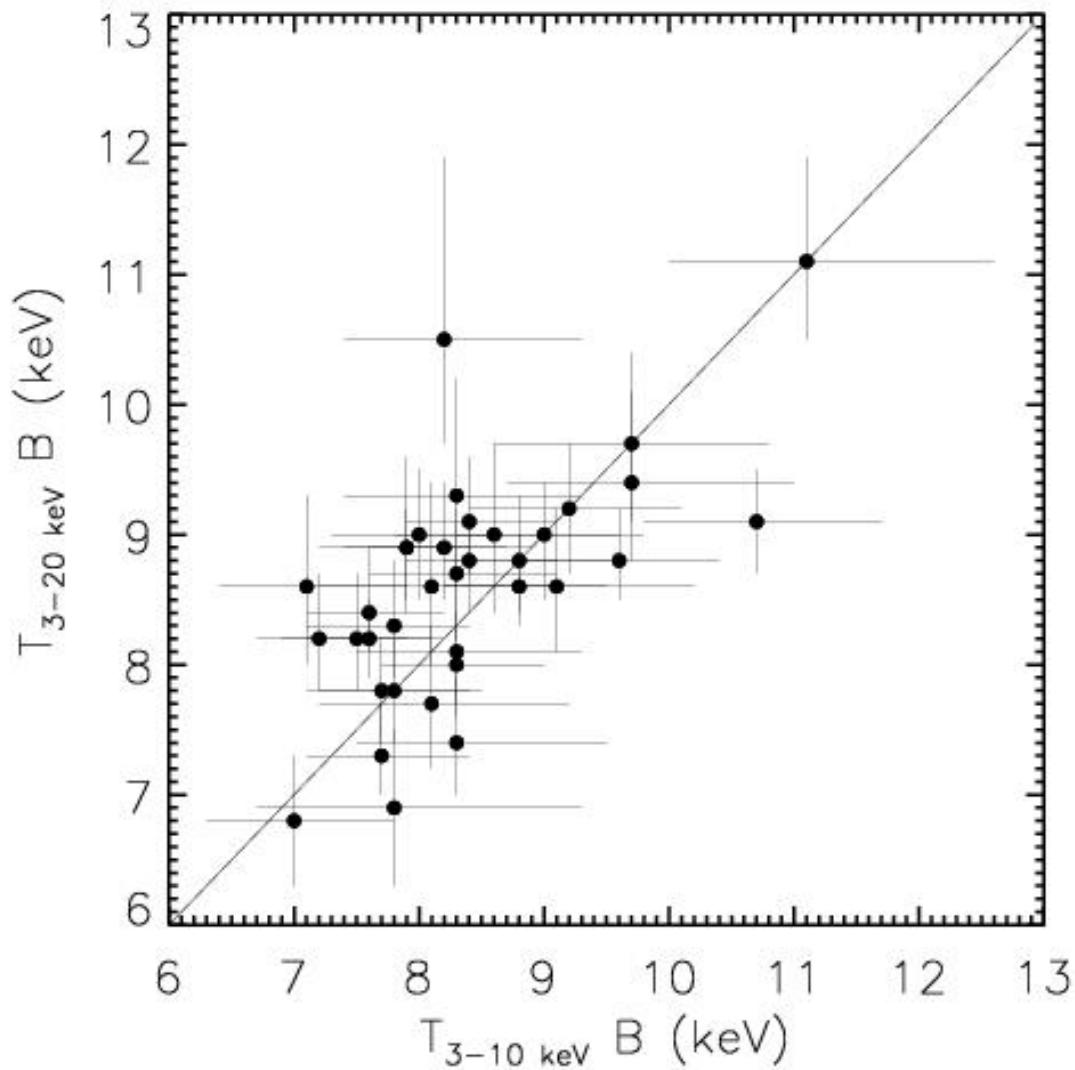

Error in T mean of 0.51 keV and stdev of 0.16 keV

COMPARISON T A 3-10 – 3-20 keV

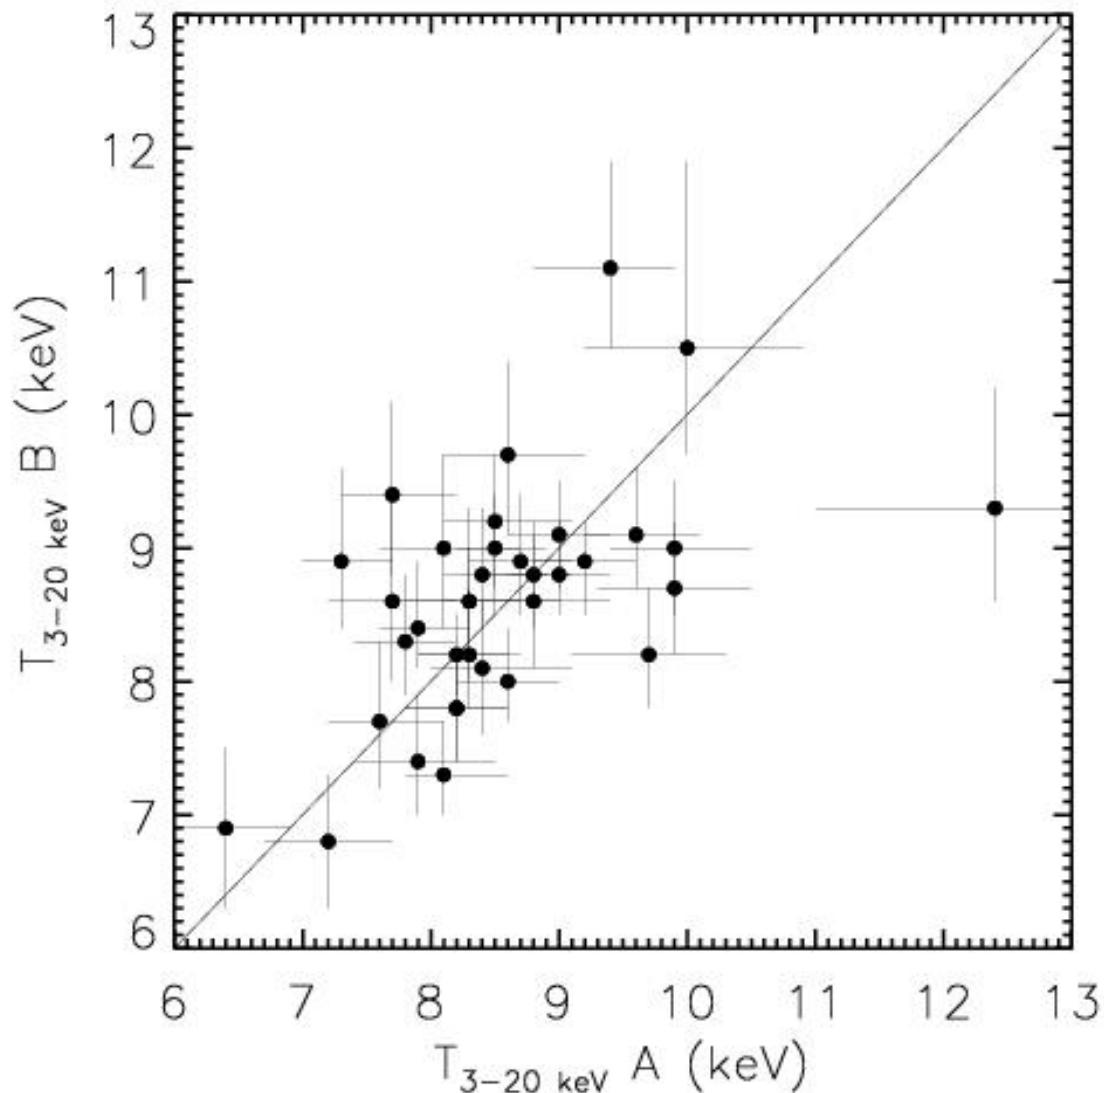

Mean of the
ratio 3-20/3-10
1.062 with
stdev 0.092

COMPARISON T B 3-10 – 3-20 keV

Mean of the
ratio 3-20/3-10
1.030 with
stdev 0.091

COMPARISON T A-B 3-20 keV

Mean of the
ratio B/A
1.010 with
stdev 0.099

CHECK WITH CHANDRA

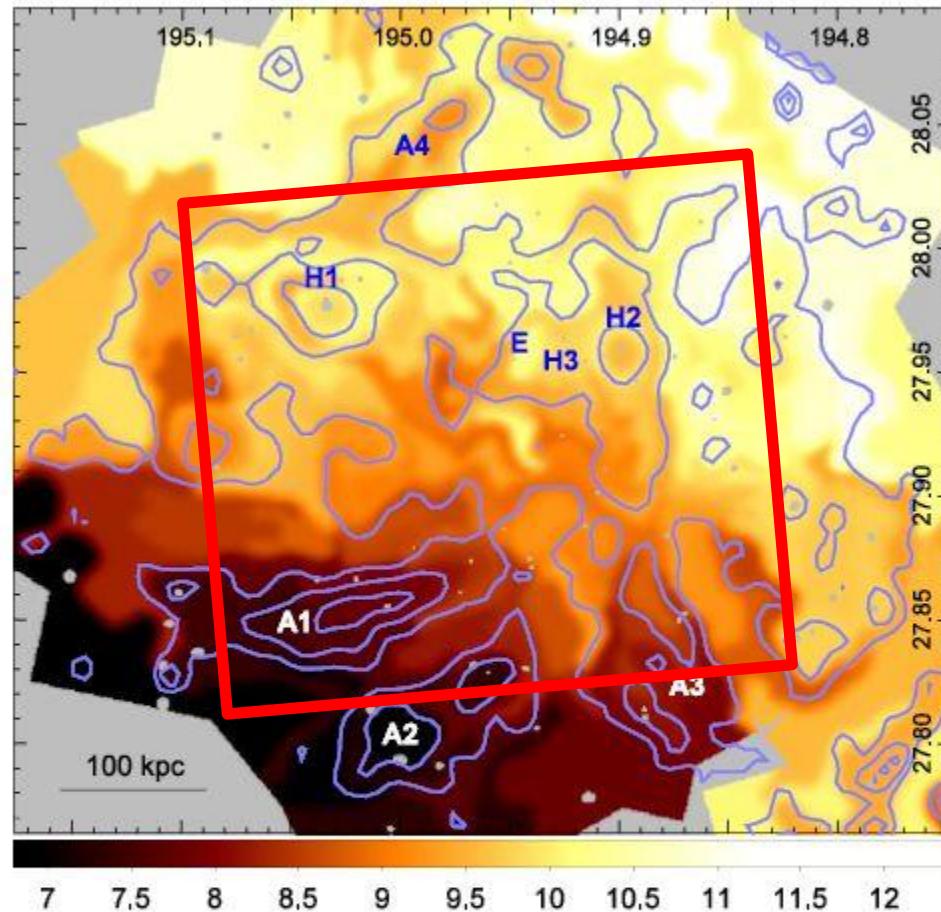

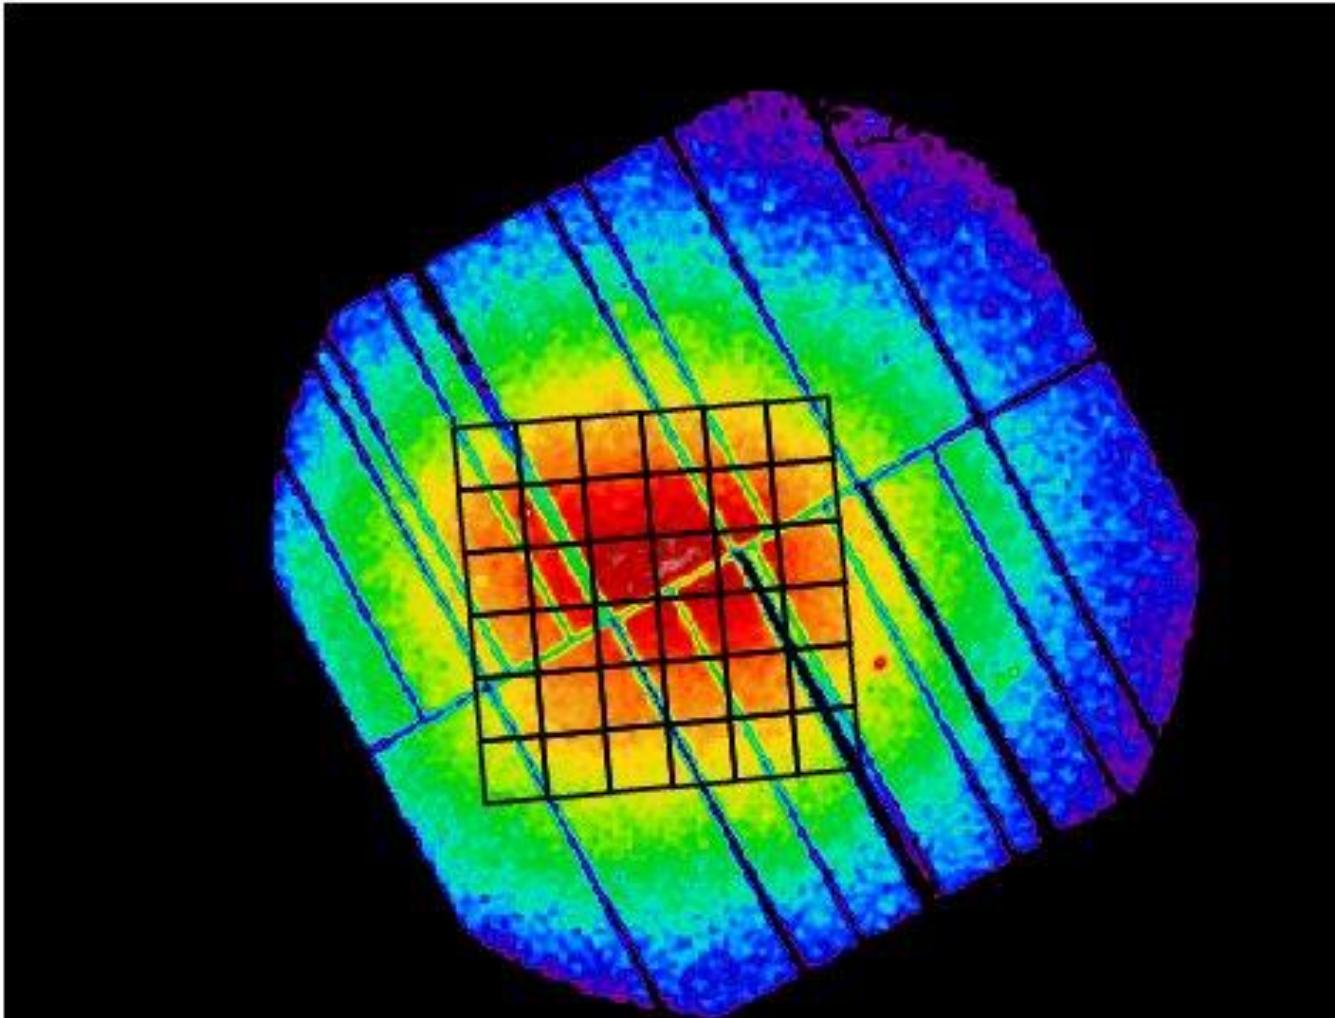

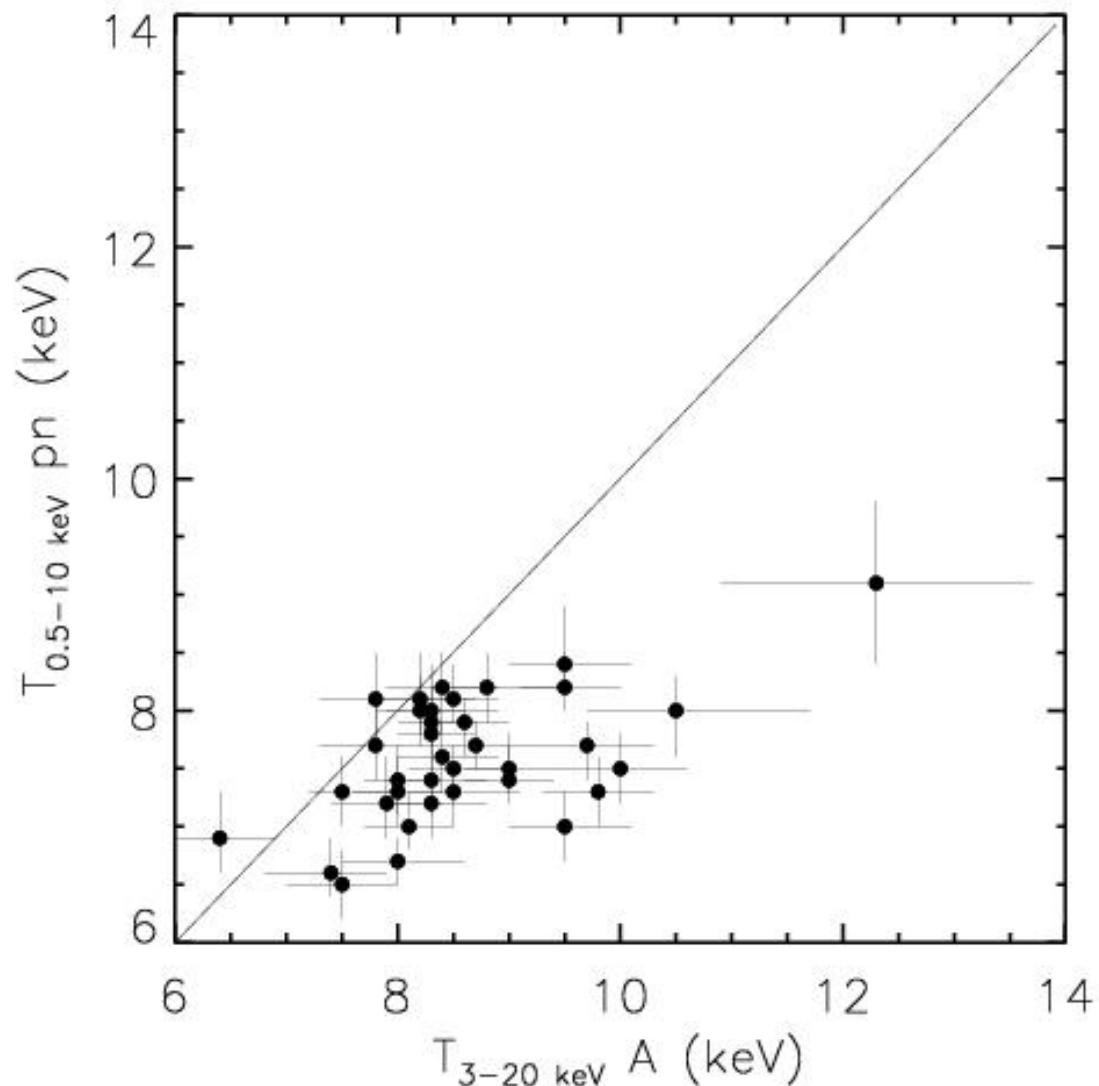

Fig. 3. Temperature map. Emission-weighted ICM temperature (keV), calculated by spectral fitting. The contours show lines of constant surface brightness enhancement in an unsharp-masked map with levels of 0, 3.5 and 7%.

SANDERS+13

COMPARISON WITH XMM pn

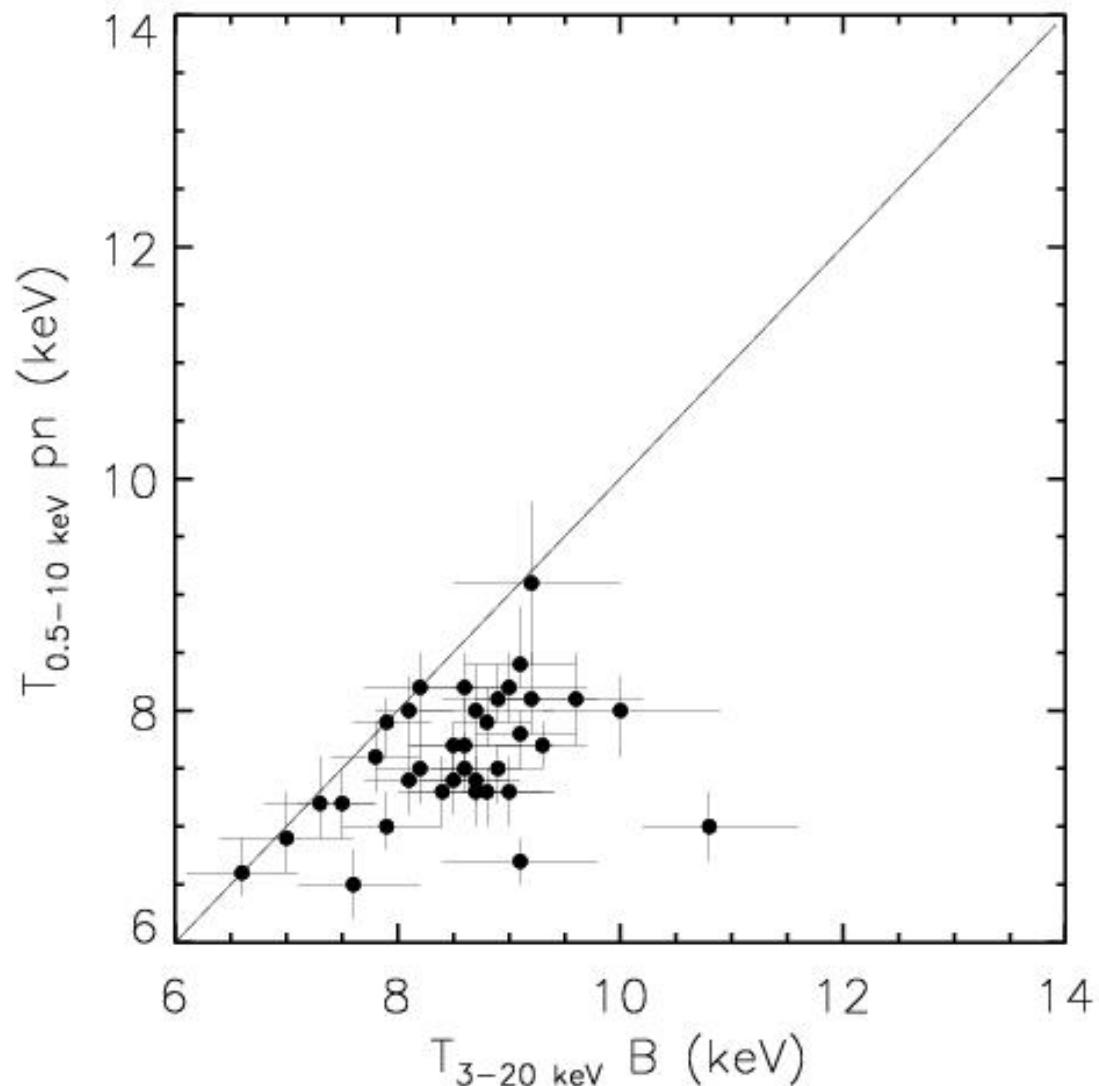

COMPARISON T A 3-20 keV-pn 0.5-10 keV

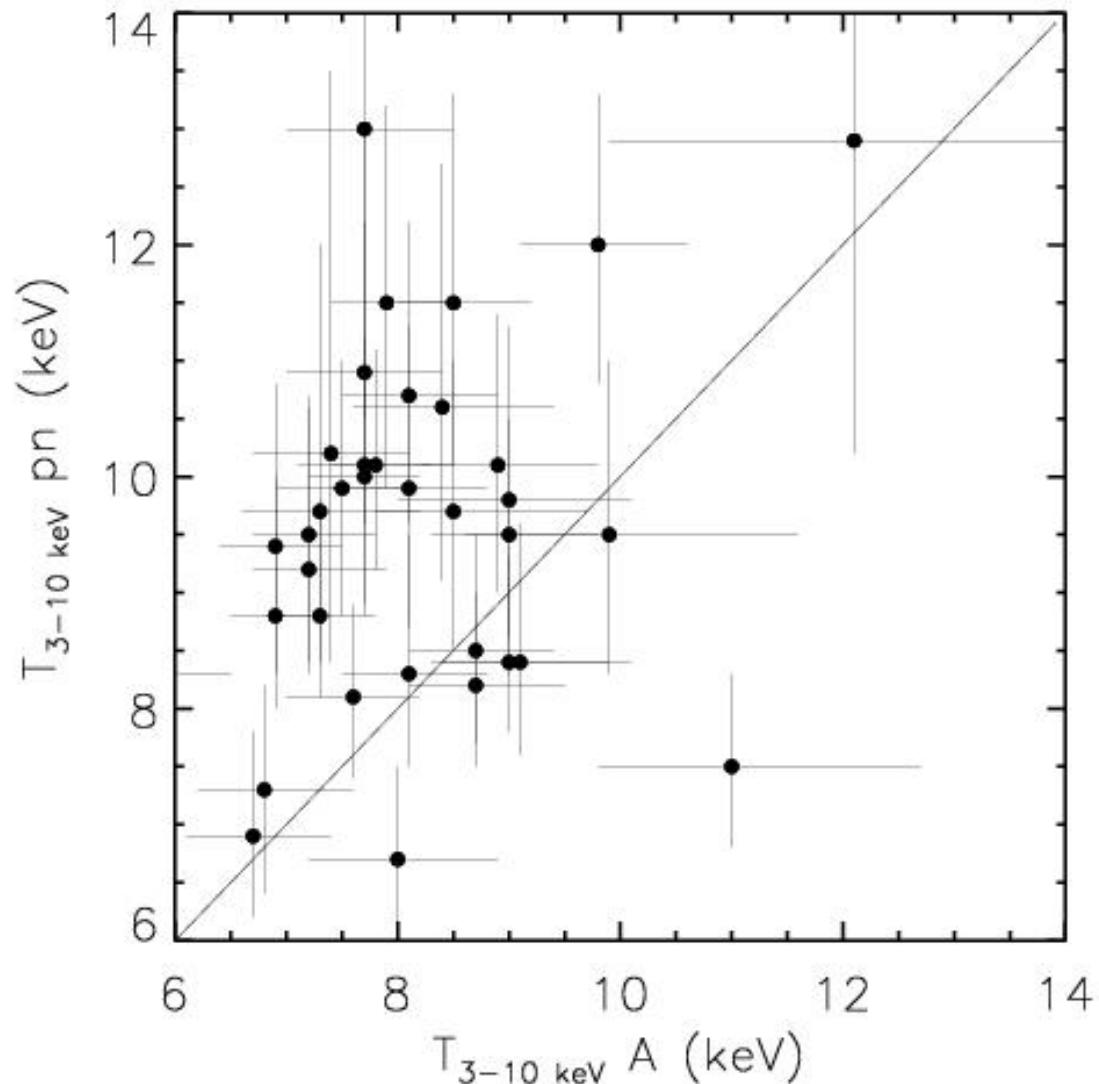

Mean of the
ratio pn/A
0.892 with
stdev 0.084

COMPARISON T B 3-20 keV-pn 0.5-10 keV

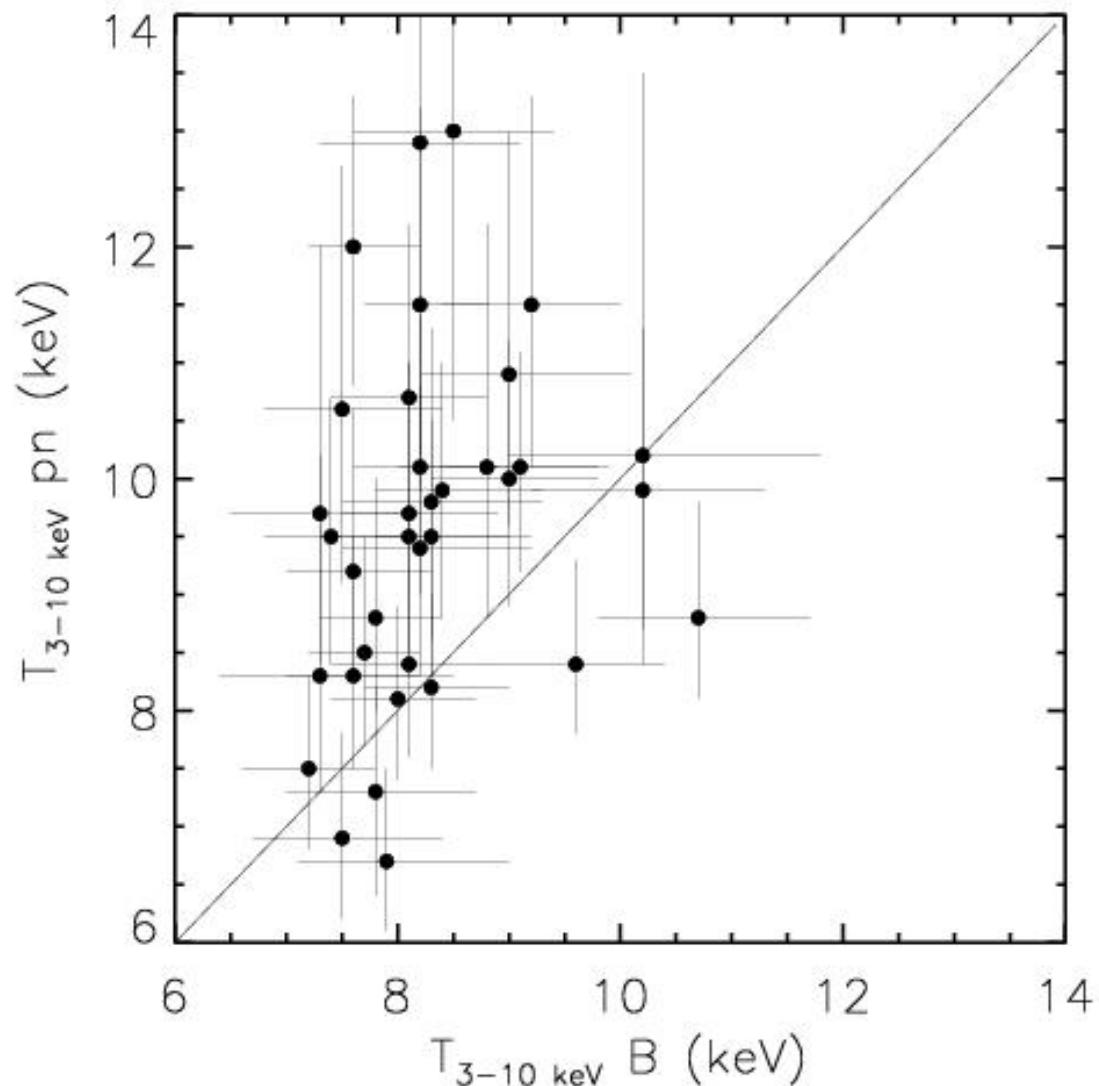

Mean of the
ratio pn/B
0.893 with
stdev 0.077

COMPARISON T A-pn 3-10 keV

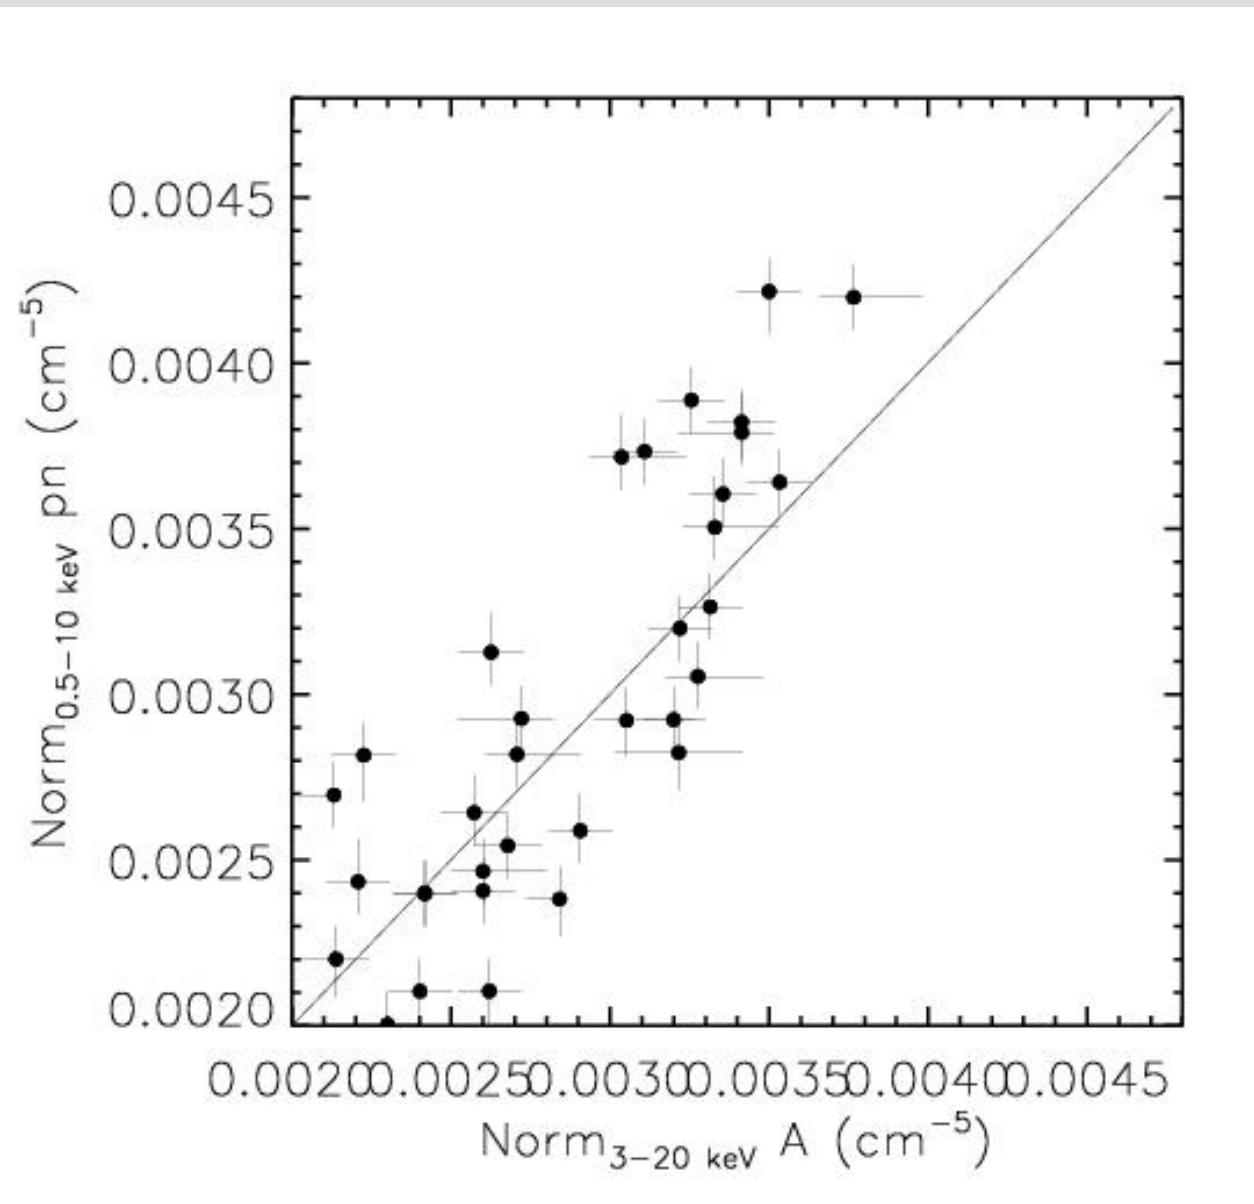

Mean of the
ratio pn/A
1.185 with
stdev 0.204

COMPARISON T B-pn 3-10 keV

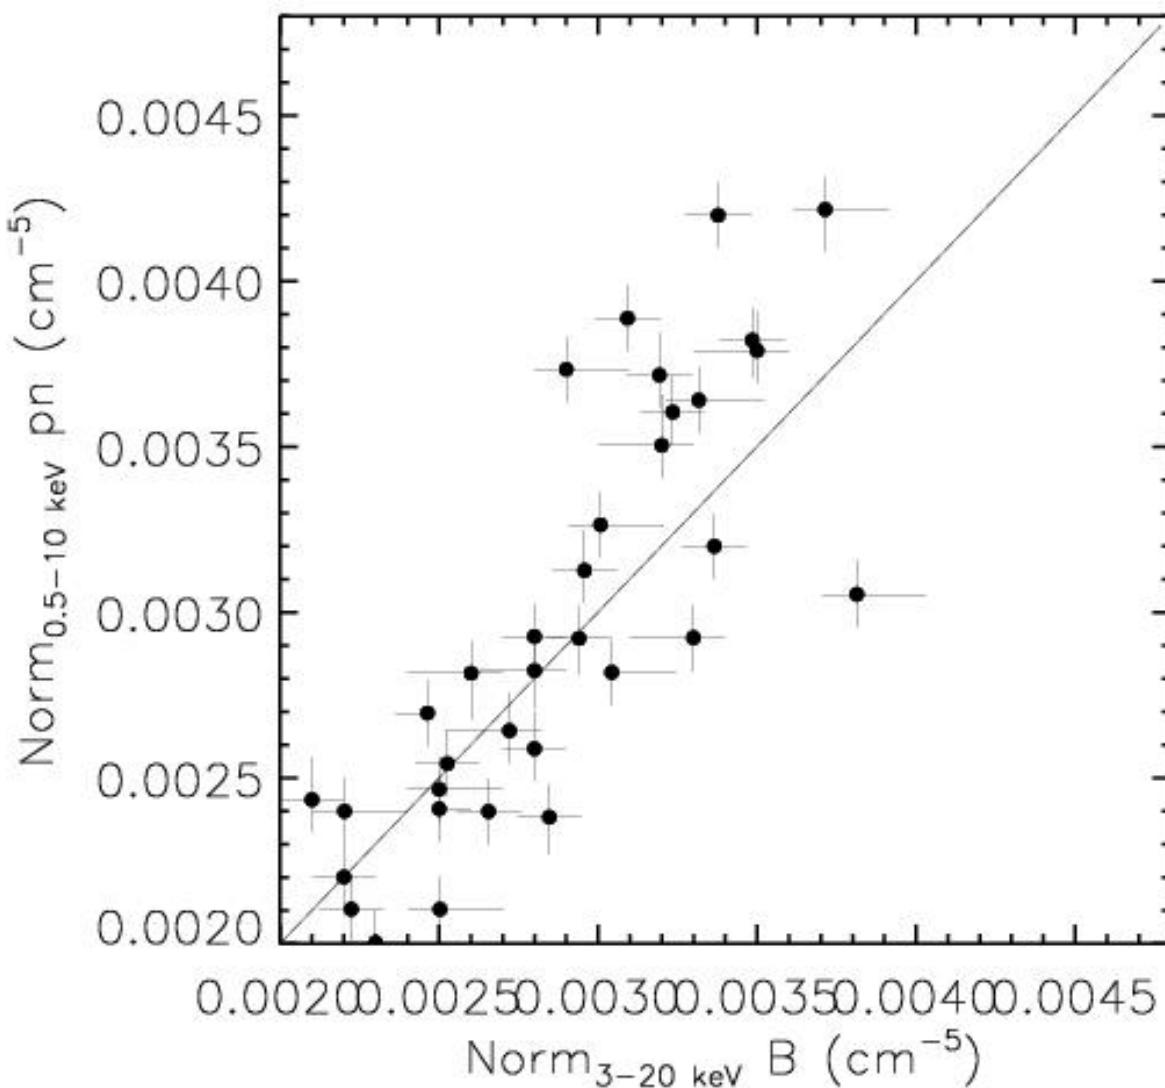

Mean of the
ratio pn/B
1.156 with
stdev 0.189

COMPARISON norm A 3-20 pn 0.5-10 keV

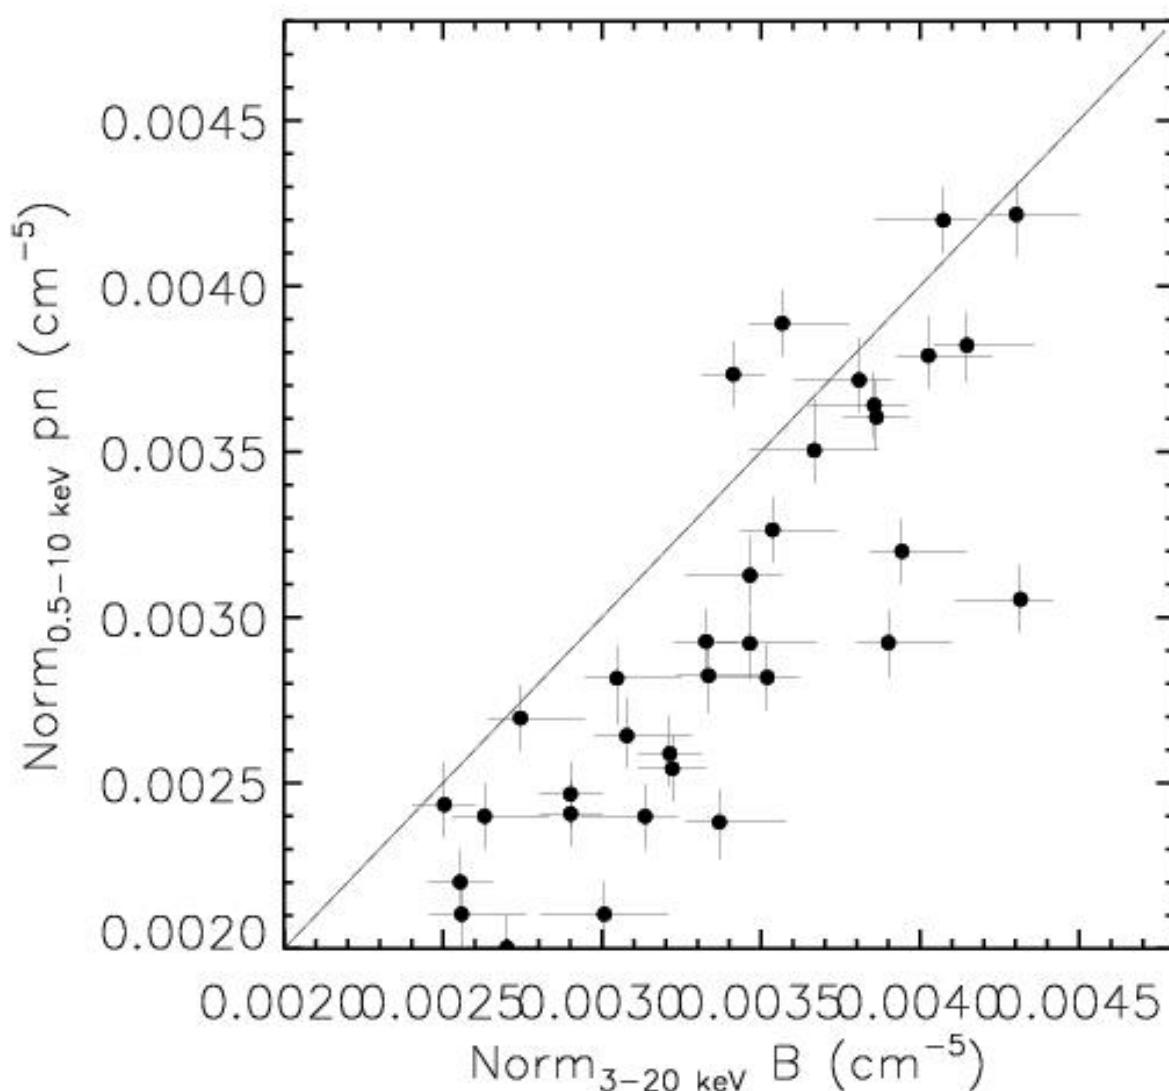

Mean of the
ratio A/pn
0.986 with
stdev 0.137

COMPARISON norm B 3-20 pn 0.5-10 keV

Mean of the
ratio B/pn
0.967 with
stdev 0.135

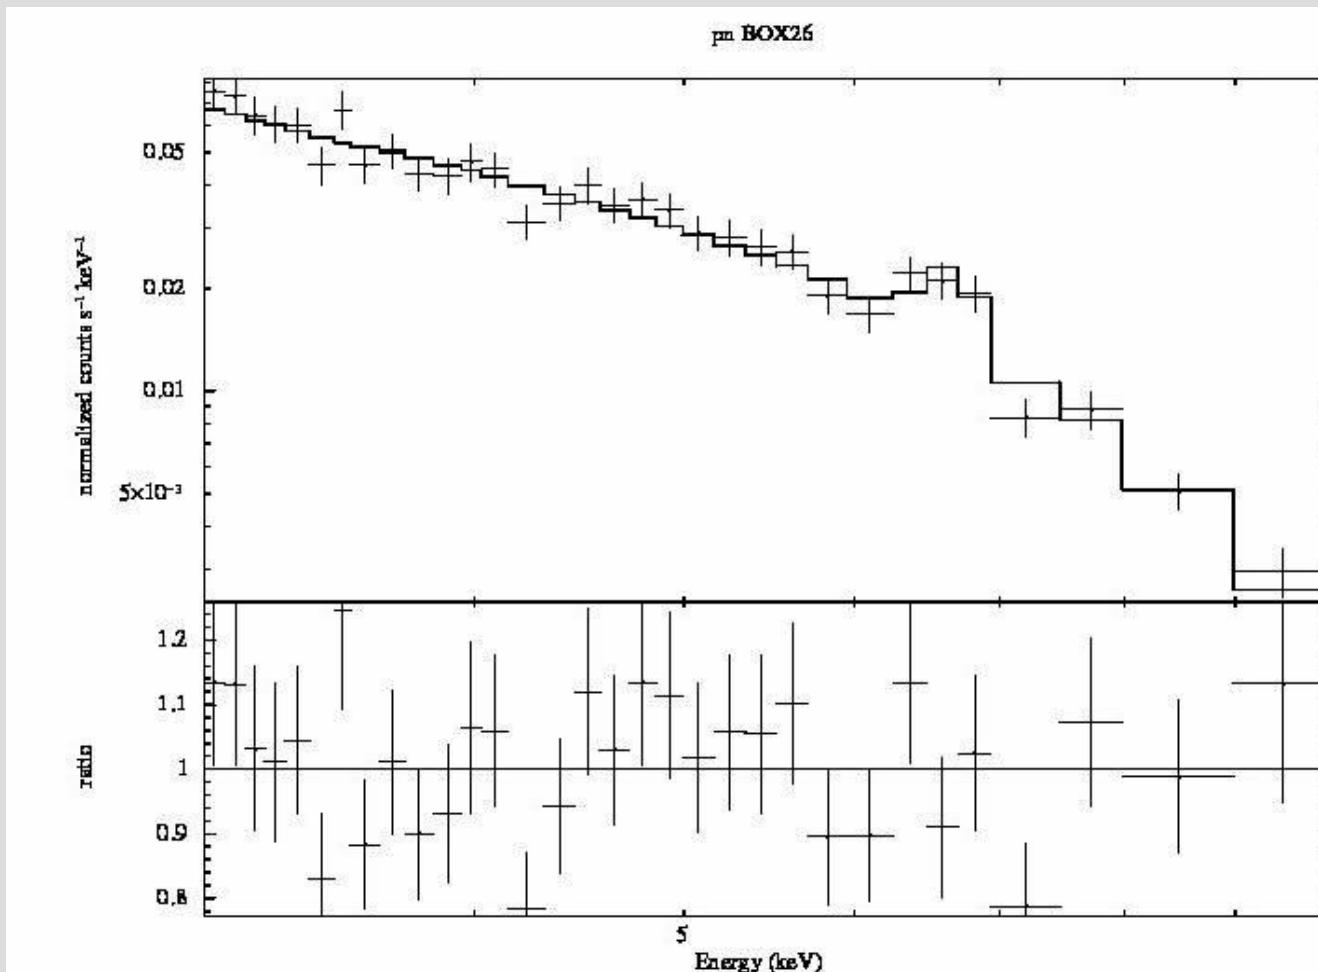

COMPARISON norm B 3-20 pn 0.5-10 keV

With nustardas
1.2.0 and caldb
20130509

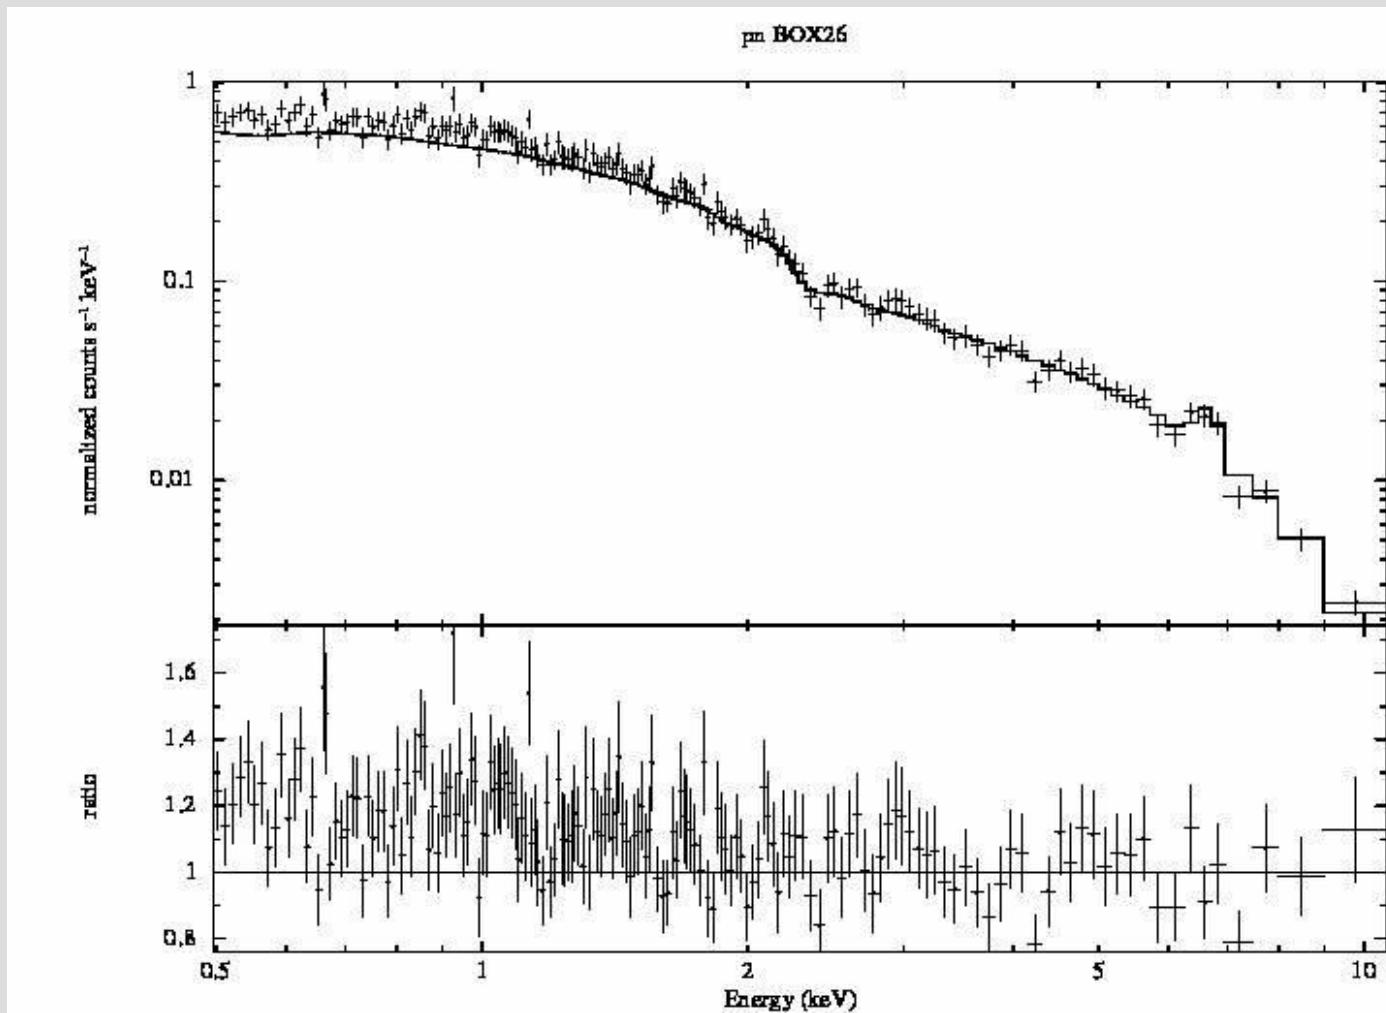

Mean of the
ratio B/pn
1.147 with
stdev 0.158

XMM pn BROADBAND FIT

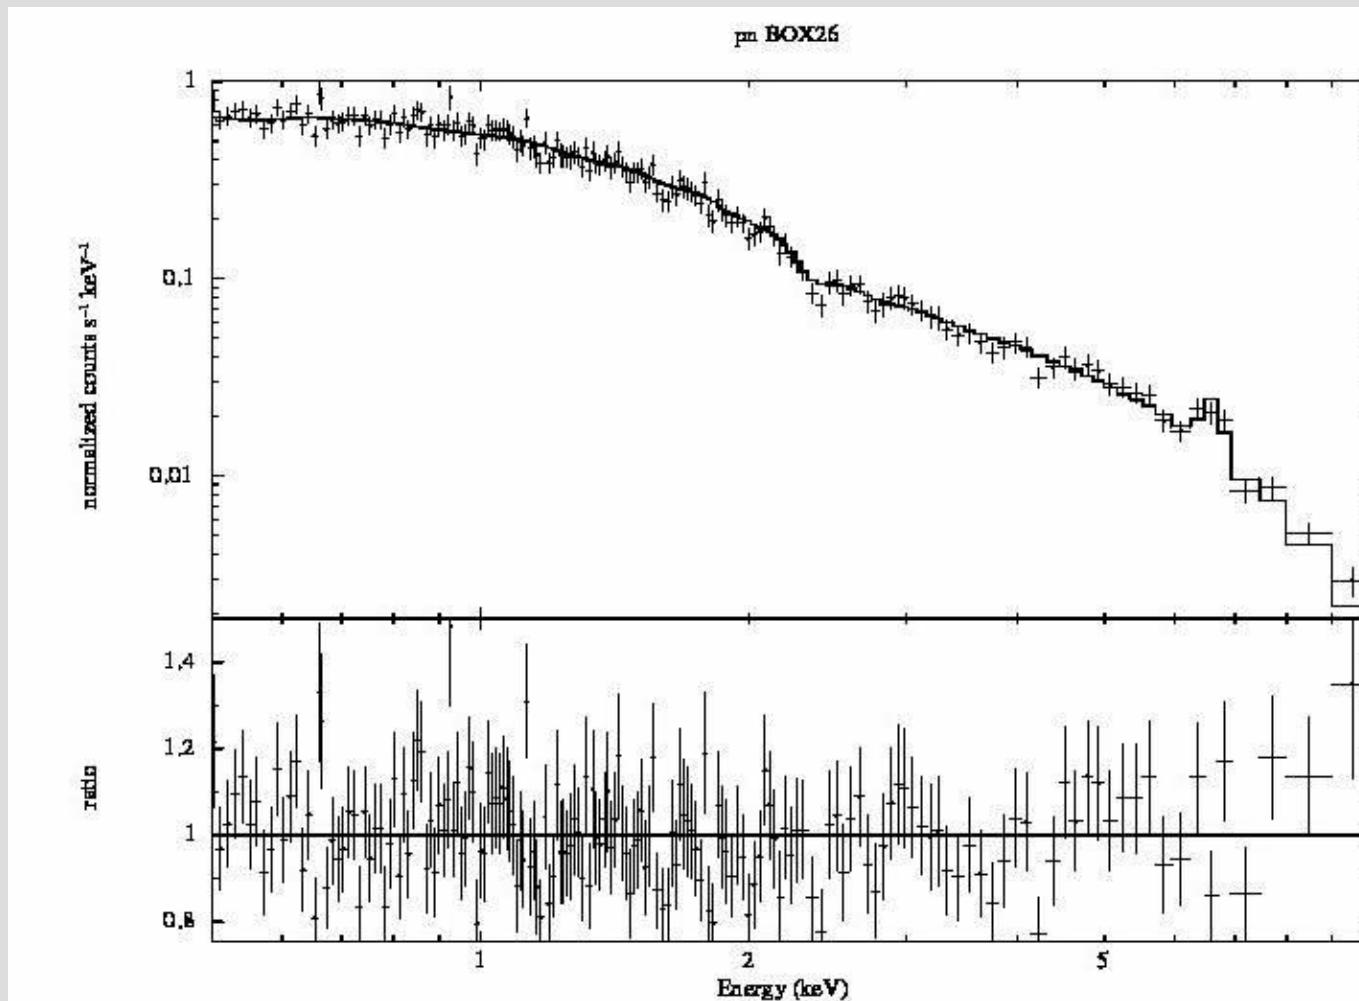

105/120 10.0 ± 1.1 norm $3.1 \pm 0.1 \text{ E-03}$ 3-10 keV

XMM pn BROADBAND FIT

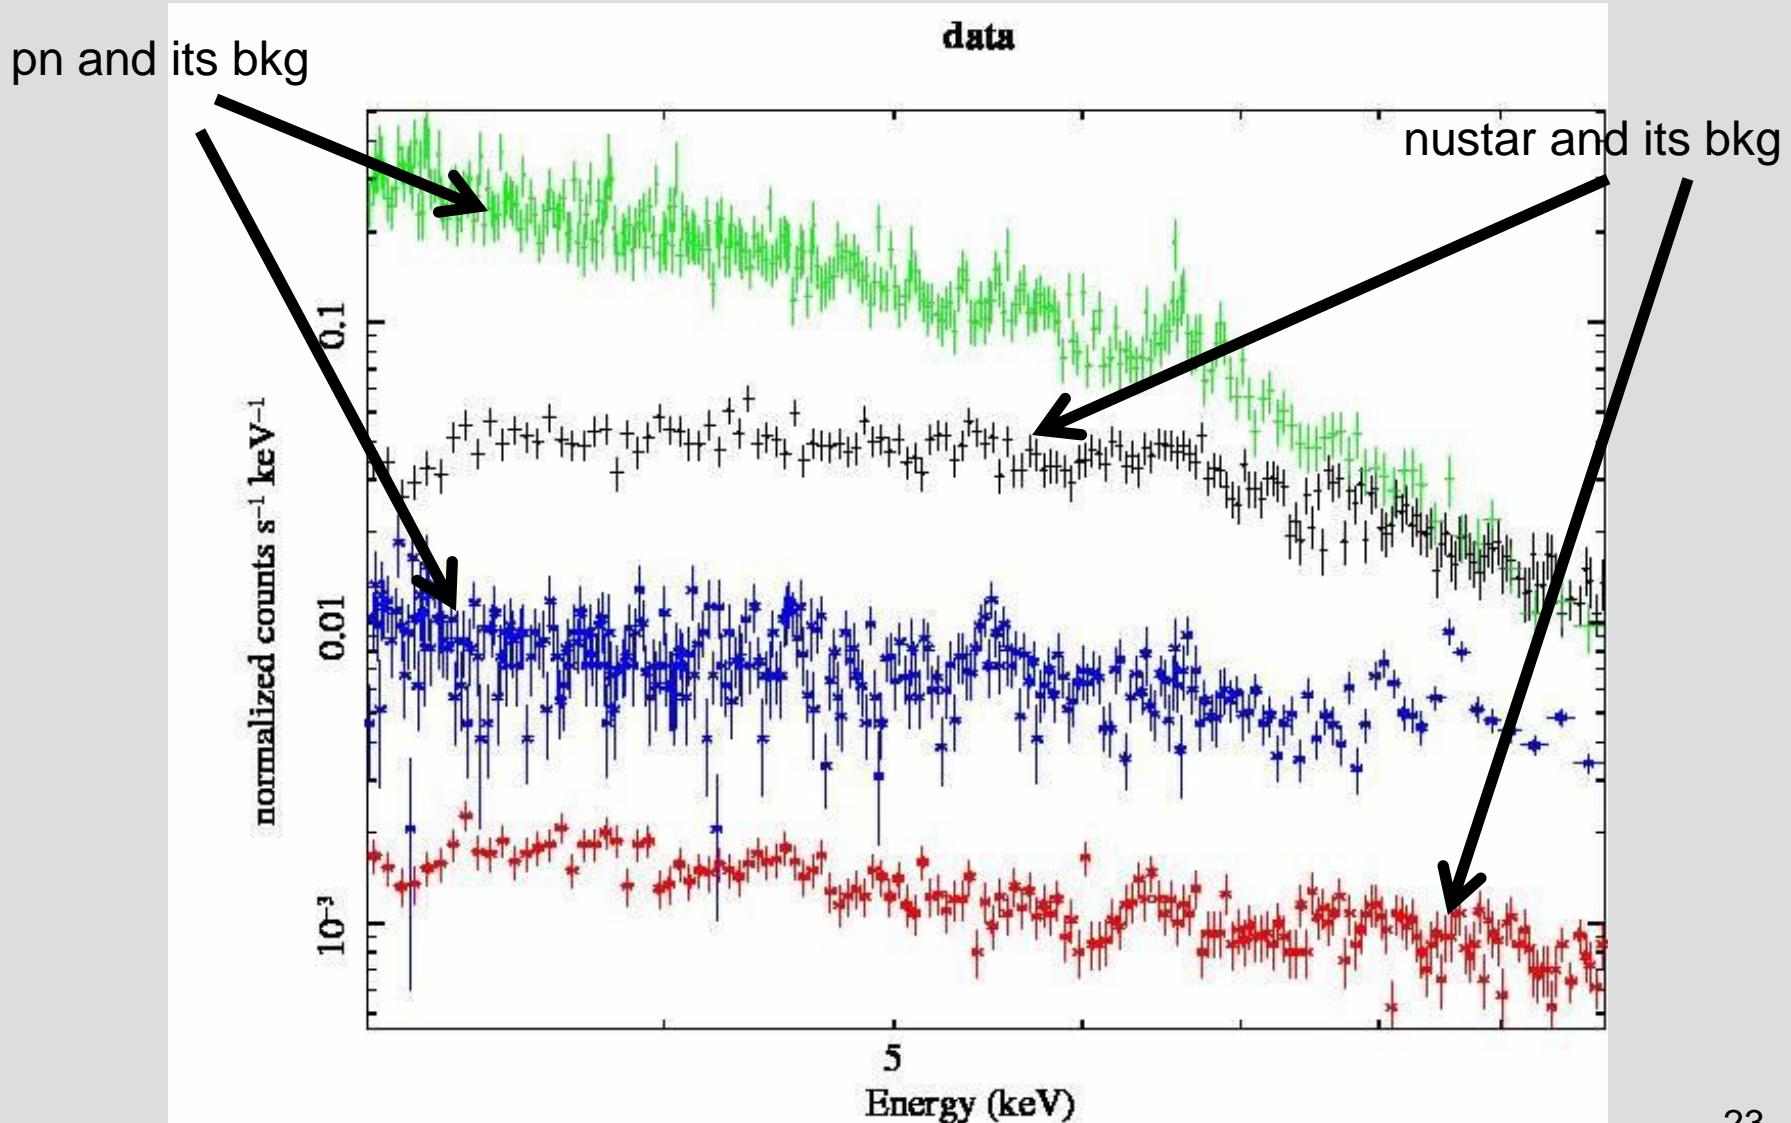

XMM pn BROADBAND FIT

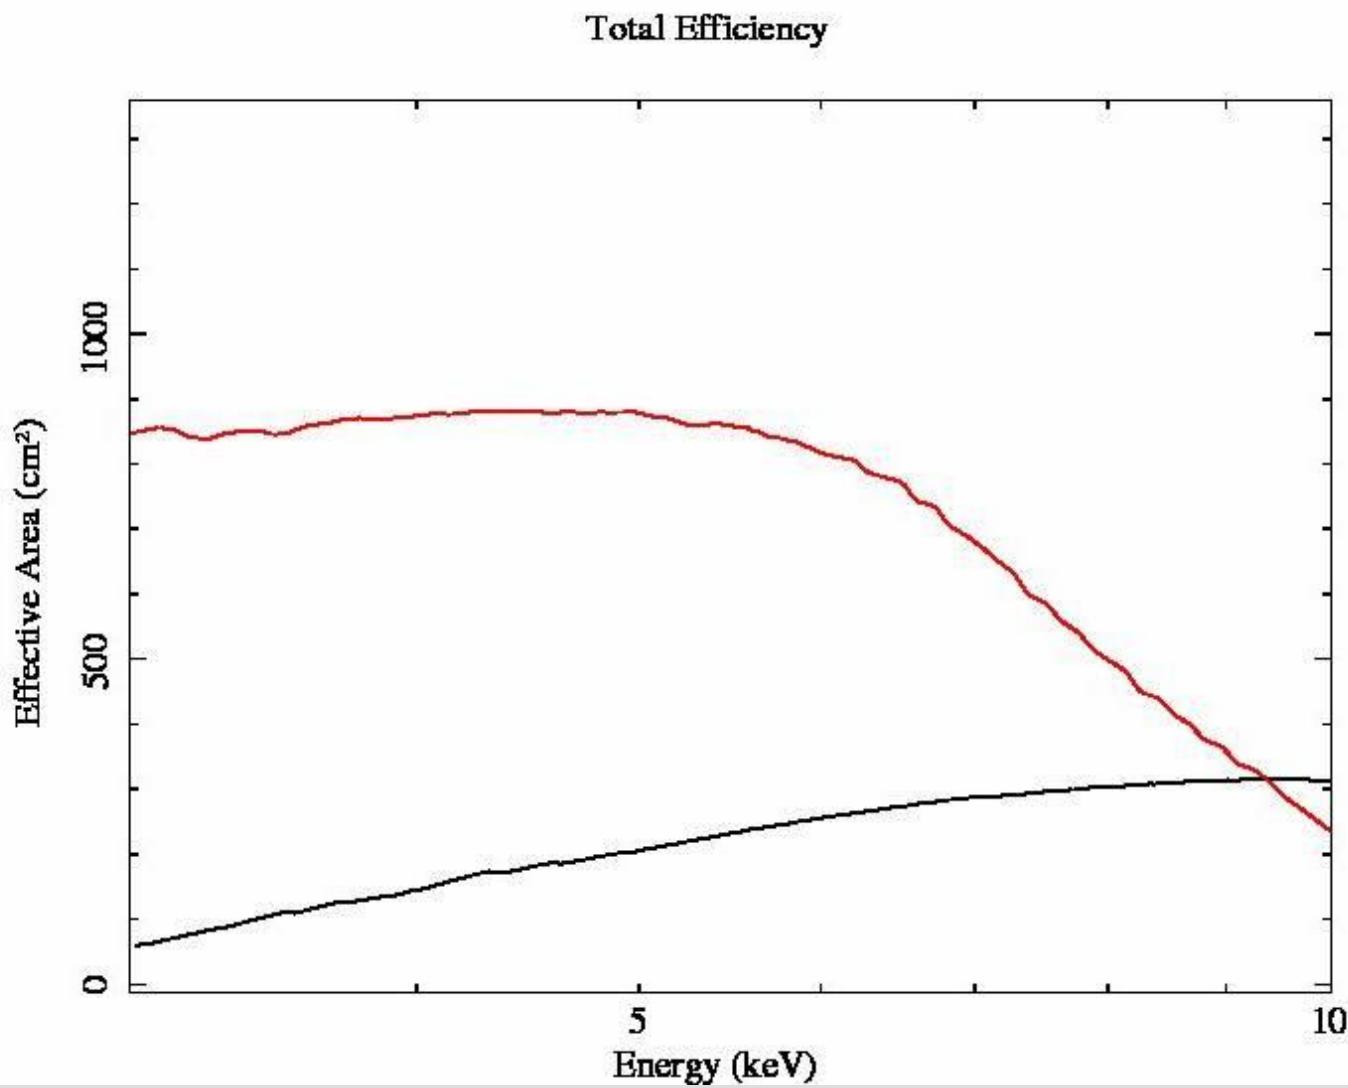

105/120 7.5 ± 0.3 norm 3.5 ± 0.1 E-03 0.5-10 keV

COMPARISON WITH XMM pn

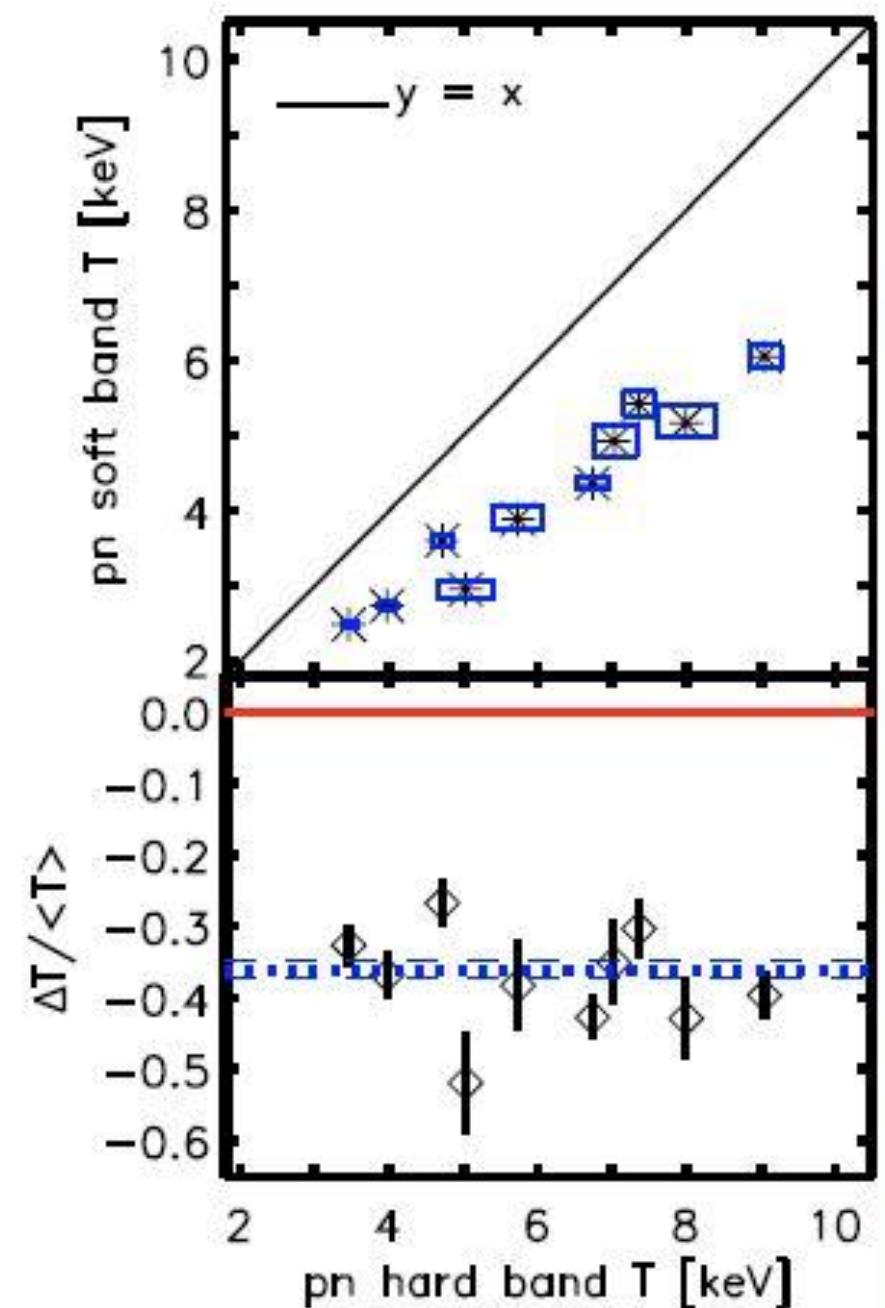

COMPARISON WITH XMM pn

SUMMARY

- NuStar has the capabilities to constrain well hot thermal plasmas like the 8-9 keV emission in Coma
- Comparison with XMM pn still stresses the problems with cluster broad band fitting (Nevalainen+10)
- Future work: more XMM obervations, fit in varius energy band (2-7 keV), Fe line ratios

NEVALAINEN+10
